

Brain Wave : An Idea to use in Early Childhood

- Babiesinc.com is a school where their intellectual abilities and self-esteem go hand-in-hand, where imagination and curiosity are cultivated, where critical thinking and competencies flourish, and where students learn to respect all cultures and people.
- Visit babies Inc on www.babiesinc.com to know more ideas.

• Babies Inc believe that children need to be treated with respect so as to allow the natural curiosity, creativity and intelligence in them to develop, yet at the same time this must be balanced with the need for them to learn the boundaries of acceptable behaviour in social interaction. Only then can they be confident in both themselves and their environment.

Book Worm :

2 Books that every school should have

A

Focused Observations by
Gaye Gronlund and
Marlyn James

News :

From around the world

As educators and parents it is our responsibility to understand the growth that takes place inside our brains so that we can fully educate our children to their maximum potential. The early childhood years are critical and will help define the child's purpose, creativity and ultimately his/her own destiny. Knowing what to teach, how to teach and understanding the development of the child and the child's brain all influence instructional and parenting practices for the young child. Dr. Stephen Rushton and Dr. Anne Rushton are brain education experts. Connect with them on www.podarjumbokidsplus.com
